

## Appendix III: Interview after Program Completion

**Developer:** Max! I'm finally done with my program.

**Client:** Oh, great! How was it?

**Developer:** Well developing the GUI was excruciating, but I actually had fun doing everything else.

**Client:** Haha, yeah, I expected that

**Developer:** So basically I need to do a lot of documentation first, but I recorded a demo video showing everything the program does. I'll send you the link. Go watch it and tell me what you think.

**Client:** Wow, that looks pretty good. The loading speeds are almost instantaneous too

**Developer:** Yeah I made a special effort to make it light. Anyways, before I send you the program files I need to ask you for your opinion on the product.

**Client:** Alright. Well, you definitely made a big improvement on the colour scheme. Everything is darker, more pleasing to the eye.

**Developer:** Yes, you can also change the colours anytime you want in the settings section. You have to restart the application though.

**Client:** Sure. Alright, there's a lot less clutter too, especially in the settings page. The scroller looks amazing.

**Developer:** Thanks, any specific part I can improve?

**Client:** The colours are just off.

**Developer:** Alright thanks, well you can change the colour in the settings.

**Client:** Overall though, considering it's your first time on tkinter, this is very good. I'm very surprised that you were able to implement your prototype of the home page. It looks very complex, and the colour scheme is just right this time 'round.

**Developer:** Oh thanks! That took the longest time to make.

**Client:** It shows.

**Developer:** That's good to hear man, glad I didn't mess up the most important page

**Client:** Haha good on you, when will I be getting this?

**Developer:** Just let me prepare my documentation and interviews, and in less than a week I'll let you know when we can see to it.

**Client:** Sounds good, see you later then.

**Developer:** See you
